

The amygdala is not emotion-encoder-specific; the sensory-cortex control is

Movie fMRI
(encoding, ΔR^2)

Face morphs
(RSA, $\Delta \rho$)

Single neurons
(RSA, $\Delta \rho$)

Audio
(encoding, ΔR^2 over vision)

Emotion-supervised encoders beat a matched object encoder in fusiform/STG (colored, significant) but not the amygdala (grey, n.s.). Units differ per arm.
